1 General Instructions

The following pages represent the Wide Area Workflow (WAWF) Data Element/Segment Cross Reference for the reporting Government Furnished Property (GFP) and Property Transfer information via EDI, into WAWF, including UID information. The tables that follow present the usage of the Segments and data elements arrayed in transaction Set Order. Only the Segments that WAWF accepts are outlined below. The information represents 856 Ship Notice/Manifest ANSI X12 transactions into WAWF. This EDI Guide was created using the latest draft of the Implementation Conventions.

NOTE: If using a word processor program (i.e. Microsoft Word, WordPerfect, Microsoft WordPad, Microsoft Write, etc.) to create EDI files, then the text must first be cut/copied out of the word processor program and pasted into Microsoft Notepad, or another ASCII text editor and saved in the text editor, before sending the data to WAWF. This converts the text to text-only format and removes control characters that contain formatting information.

Sending Attachments to WAWF:

To send attachments to WAWF that are related to an EDI transaction via SFTP, Vendors must use the attachment code "E9" (See REF Segment at Pos. 150) to associate the attachment with the transaction.

WAWF provides Vendors the capability to manually FTP over attachments electronically. These attachments can then be referenced and attached to inbound EDI transactions. Please contact the Help Desk for assistance in setting up a directory on the FTP server to submit attachments using this method. Once set up with a directory, Vendors will need to FTP over their file as a separate action from submitting the EDI file. The attachment needs to be present on the server at the time the inbound EDI file is processed by WAWF.

To send attachments to WAWF via EDI, Vendors may also use the 841 EDI Transaction Set. Vendors may not use the 841 EDI Transaction Set for anything other than sending attachments.

Please refer to the EDI_WAWF_Guide.doc for detailed EDI enveloping instructions for attachment data as only one document (i.e. one Transaction Set) can be transmitted with one 841 in an ISA/IEA when attachment data is submitted to WAWF.

WARNING: Wide Area Workflow (WAWF) is designated for Sensitive Unclassified information ONLY. Do NOT upload classified attachments into WAWF.

Fields included within WAWF display the “Type” Field depicting the value used.

- **Nv** Numeric Field where v = number of decimal positions, decimal is implied (i.e. 300 will be read as 3.00)
- **R** Decimal number. If value includes decimal, then WAWF requires decimal point and value be sent: WAWF will NOT imply or assume decimal points. Examples:
 - 300 will be read into WAWF as “300”
 - 3.00 will be read into WAWF as “3”
 - 3.5 will be read into WAWF at “3.5”

- **DT** All Date Fields use this format: CCYYMMDD
- **TM** All Time Fields use this format: HHMMSS

Notes:

Above and below each Segment are notes pertaining to WAWF. The values WAWF accepts are noted in the table for each Segment. WAWF ignores qualifier codes not identified in this guide.

The word “must” in a Segment Note implies that the Segment is mandatory. The word “may” in a Segment Note implies that this Segment is Conditional based on the terms of the contract or the needs of the contractor.

- VRC, which is Receipt by Contractor without Shipment Document in WAWF from Contractor, then N101 = PG, N103 = 33 (CAGE) and actual CAGE code is entered in N102. And N101 = AQ and N103 = 33 (CAGE) and actual CAGE code entered in N104.
- VRD, which is Receipt by Contractor without Shipment Document in WAWF from Government, then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104 and N101 = AQ and N103 = 33 (CAGE) and actual CAGE code entered in N104.
- GR, which is Receipt by Government without Shipment Document in WAWF, then N101 = PG, N103 = 33 (CAGE) and actual CAGE is entered in N104. And, AQ and N103 = 10 (DoDAAC) and actual DoDAAC entered in N104.
- GRD, Receipt by DoD without Shipment Document in WAWF from DoD, then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104. And, N101 = AQ and N103 = 10 (DoDAAC) and actual DoDAAC code is entered in N104.

If 048 is entered in BSN07 and WAWF (Shipment) Transfer Type is:

- VV, which is Contractor to Contractor, then N101 = PG and N103 = 33 (CAGE) and N101 = AQ, then N103 = 33 (CAGE) and actual CAGE is entered in N104.
- VG, which is Contractor to Government, then N101 = PG, N103 = 33 (CAGE) and actual CAGE is entered in N104. And, N101 = AQ and N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104.
- GV which is Government to Contractor, then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104. And, N101 = AQ, N103 = 33 (CAGE) and actual CAGE is entered in N104.
- GG, is Government to Government, Dept. of Defense to Dept. of Defense (D2D), then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104. And, N101 = AQ, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104.

If A59 is entered in BSN07 and WAWF Transfer Type is:

- CC, which is government property moved from one contract to another contract and the Prime Contractor does not change (same Contractor), therefore the Contractor Shipper and Receiver CAGE codes are the same.

If A02 is entered in BSN07 and WAWF (Receipt) Transfer Type is:

- VV, which is Contractor from Contractor, then N101 = PG and N103 = 33 (CAGE) and N101 = AQ, then N103 = 33 and actual CAGEs are entered in N104.
- VG, which is Government from Contractor, then N101 = PG, N103 = 33 (CAGE) and actual CAGE is entered in N104 and N101 = AQ and N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104.
- GV, which is Contractor from Government, then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104 and N101 = AQ, N103 = 33 (CAGE) and actual CAGE is entered in N104.
- GG, which is Government to Government, D2D (Receipt from DoD Receiver for document created by DoD Shipper), then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104 and N101 = AQ, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104.

If ZZZ is entered in BSN07 and WAWF (Receipt) Transfer Type is:

- SV, which is Government to Contractor (Contractor receiving from the Government an WAWF generated GFP document produced from an acquisition Receiving Report), then N101 = PG, N103 = 10 (DoDAAC) and actual DoDAAC is entered in N104 and N101 = AQ, N103 = 33 (CAGE) and actual CAGE is entered in N104.

BSN08 Notes:

For Void or Void & Replace documents (when BSN01 = “01” for Void or “05” for Void & Replace), the following Key data elements cannot be changed:

Contract Number, (GF Segment)
Delivery Order Number, (GF Segment)
Shipment Number (BSN02)

1.3 DTM Segment – Date/Time Reference, Pos. 040 – Header

NOTES: There may be one instance of DTM for WAWF.

This Segment can only be used to report the Effective Date when government property is moved from one contract to another and the prime contractor does not change. (WAWF Transfer Type is therefore “CC”).

This Segment can only be used when the code A59 is reported in BSN07.

When this Segment is used, the Shipment Date (DTM, Pos. 200) is not required.

1.4 HL Segment – Hierarchical Level, Pos. 010 – Detail

Loop ID: HL

NOTES: There may be one instance of HL per HL Loop.

WAWF only accepts one instance of the Address Loop (HL03 = V), one instance of Shipment Loop (HL03 = S), and one to 999 instances of the Line Item Loop per transaction (HL03 = I), multiple iterations of the UID Loop (HL03 = D), HL03 = J when reporting Current Part Number, multiple instances of the Pack Loop (HL03 = P), and multiple instances of Serial Number/Supply Condition Code Loop (HL03 = G).

<i>Segment</i>	<i>Description</i>	<i>Element</i>	<i>GFP WAWF Min/Max</i>	<i>GFP WAWF Req.</i>	<i>GFP WAWF Receipt</i>	<i>WAWF Notes</i>	<i>Type</i>
HL01	Hierarchical ID Number	628	1/12	O	O	In the first Loop, cite number 1. Increased by one each subsequent Loop.	AN
HL02	Hierarchical Parent ID Number	734	1/12	O	O	For second Loop, (shipment) cite the first Loop to identify the Address associated with shipment. For third Loop and subsequent Loops, (Line Item) cite the applicable second or third Loop. Repeat shipment and Line Item Loops as necessary. For fourth (UID) and fifth Loops (Pack/RFID), repeat as necessary.	AN
HL03	Hierarchical Level Code	735	1/1	M	M	Defines characteristic of a level in a hierarchical structure. See list below. UIDs are optional.	ID
HL04	Hierarchical Child Code	736	1/1	O	O	Indicates if there are subordinate Segments to the structure. See list below. If HL03 = P, then HL04 is not used in WAWF.	ID

Samples:

HL^1^^V^1 = first level, sending Address information for entire transaction

HL^2^1^S^1 = second level, sending shipping information for entire transaction to Address in first level

HL^3^2^I^1 = third level, send Line Item information relating to shipment sent in second level

HL^4^3^D^0 = fourth level, send UID information relating to Line Items sent in the third level (duplicate UIDs per document will not be allowed)

HL^5^4^J^0 = fifth level, use to send Current Part Number information

HL^6^2^P = sixth level, sending Pack (RFID) information related to shipment

HL^3^2^G^0 Quality Characteristics – Used to report Item Serial Number information and Supply Condition Codes for UIDs

Notes:

- IC allows for Hierarchical Level Codes (HL03) listed. WAWF rejects transactions without Address Information (HL03=V) and Shipment information (HL03=S) and at least 1 Line Item (HL03=I).
- WAWF rejects transactions with any Loops other than those below.
- If HL03=J is used, it will always follow the HL03=D loop. When HL03=J is reported, the SLN segment, SLN06 will be used to report the Current Part Number Cost while the SLN09 will contain the code “MG” for Current Part Number and SLN10 will contain the actual Current Part Number. A DTM Segment will follow the SLN segment and contain the Current Part Number Effective Date, thus the DTM01 will be 007, and DTM02 will be the actual date.
- A new HL Loop will be used to submit Serial Numbers coupled with Supply Condition Codes. This loop can be a child of either the HL03 = “I” (Line Item Loop) or HL03 = “D” (UID Loop) Loops.

WAWF Allows The Following Codes:

HL03 - Hierarchical Level Codes

- I Item – indicates individual Line Item Loops
- S Shipment – indicates individual Shipment Loops
- V Address – identifies Address Loop for transaction set
- D UID – Use to report UID information to WAWF
- J Part Characteristic – use to report GFP Current Part Number information

P Pack – Used to report Pack (RFID) information to WAWF

G Serial Number / Supply Condition Code

HL04 - *Hierarchical Child Codes – not used when HL03 = P in WAWF*

0 No subordinate HL Segment is in this hierarchical structure

1 Additional subordinate HL Data Segment in this hierarchical structure

1.5 LIN – Item Identification, Pos. 020 – Detail

Notes:

- WAWF rejects transactions without an LIN Loop and without data in LIN01.

- WAWF rejects transactions with codes that are not listed within the Product/ Service ID Qualifier Codes table.
- IC allows for 15 pairs of Product/Service ID Qualifiers (LIN02 through LIN31). WAWF will allow up to 15 Product/Service Qualifiers and ID pairs (LIN02-LIN31). If additional information is to be provided, use the PID Segment.
- If Product/Service ID Qualifier in LIN02 is FS, then the Product/Service ID must be 13 numeric characters reported in LIN03.

1.6 SN1 Segment – Item Detail, Pos. 030 – Detail

NOTES: There must be one instance of SN1 per LIN Loop.

WAWF only accepts SN1 in the Line Item Loop (HL03 = I).

1.12 TD5 Segment – Carrier Details, Pos. 120 – Detail

NOTES: There may be one instance of TD5 in the Shipment Loop (HL03 = S).

WAWF will ignore TD5 data past the first instance.

If the TD5 segment is submitted, then either the Standard Carrier Alpha Code or the Transportation Method/Type Code must be entered.

TD501 is used in conjunction with the Secondary Tracking Number and Bill of Lading which will be reported in the REF Segment, Pos. 150.

TCN (Transportation Control Number) is not a Secondary Tracking Number and is not to be used in conjunction with TD501, TD502 or TD503. TCN is reported in REF01 = TG.

1.13 REF Segment - Reference Numbers, Pos. 150 – Detail

NOTES: There may be multiple instances of REF per HL Loop.

WAWF will accept REF in the Shipment Loop (HL03 = S), the Line Item Loop (HL03 = I), the UID Loop (HL03 = D), the Pack Loop (HL03 = P), and the Serial Number / Supply Condition Code Loop (HL03 = G).

When HL03=S and a REF Segment is used to report the Bill of Lading and/or Secondary Tracking Number, the REF Segment containing the Bill of Lading and/or Secondary Tracking Number information must follow the TD5 segment.

REF may be used in connection with shipping hierarchy to identify Bill of Lading, Transportation Control Number, Serial Shipping Container Code, Secondary Transportation Tracking Number and Transportation Leg Association.

- The comments will be concatenated into a single comment which may not exceed 2000 characters.
- GFP Receipt: Comments are mandatory upon rejection of document/UIIs.
- When EDI submissions are identified as a “Draft”, the system will process them inbound using the following minimal data set requirements:
 - Vendor CAGE
 - Contract Number Type (Defaults to DoD Contract (FAR) if not entered)
 - Contract Number
 - Delivery Order Number
 - Pay Official DoDAAC
 - Document Type
 - Routing DoDAACs depending on the document type and pay system
 - Invoice/Shipment Number depending on the document type
 - If any Line Item data is submitted, the Item No is mandatory

Once submitted as a “Draft”, all documents must be processed via the web interface using the current “Save and Continue” functionality. There will be no ability to “add to a document” via additional electronic submissions.

- If any UIIs or Item Serial Numbers are packed, all UIIs and Item Serial Numbers must be packed.
- Receipt without Shipment document scenarios automatically receive UIDs/Item Serial Numbers entered on the document upon submit.

REF03 – *Unique Identifier – UID Type Edits*

When the UID Type (SLN10) is “UID1,” concatenate the following elements in the order listed and enter in REF03 (REF Segment, Pos. 150 Detail):

- Issuing Agency Code, SLN16 (Omit from concatenation if value is 0-9)
- Enterprise Identifier, SLN12
- Serial Number, REF02 (REF Segment, Pos. 150 Detail)

When the UID Type (SLN10) is “UID2,” concatenate the following elements in the order listed and enter in REF03 (REF Segment, Pos. 150 Detail):

- Issuing Agency Code, SLN16 (Omit from concatenation if value is 0-9)
- Enterprise Identifier, SLN12
- Original Part Number, SLN14 Or Batch/Lot Number, SLN18. Enter Part Number even if not used in UII creation.
- Serial Number, REF02 (REF Segment, Pos. 150 Detail)

When the UID Type (SLN10) is “ESN,” the following must be applied and entered in REF03 (REF Segment, Pos. 150 Detail):

- The UII must be 8 characters long.
- The UII must consist of the digits 0– 9, and the letters A– F only.

When the UID Type (SLN10) is “VIN,” the following must be applied and entered in REF03 (REF Segment, Pos. 150 Detail):

- The UII must be 17 characters long.
- The UII must be composed of letters and numbers only and cannot contain the letters “I,” “O,” and “Q.”

When the UID Type (SLN10) is “GIAI,” the following must be applied and entered in REF03 (REF Segment, Pos. 150 Detail):

- The first position of the UII must be a number (0-9). Applies to Acquisition only.

When the UID Type (SLN10) is “GRAI,” the following must be applied and entered in REF03 (REF Segment, Pos. 150 Detail):

- The UII cannot be greater than 30 characters or less than 15 characters.
- The UII first position must be the digit 0 (zero)
- The UII positions 2 – 15 can only contain digits (0– 9)
- The UII 14th position must contain the check digit. To verify its correctness, perform the following:

- Sum the digits in positions 1, 3, 5, 7, 9, 11, and 13 then multiply the sum by 3.
- Sum the digits in positions 2, 4, 6, 8, 10, and 12.
- Add the two resulting sums together.
- Determine the smallest number which when added to the sum produces a multiple of 10. This number is the check digit.
- Compare the value of position 14 with the calculated check digit. If they are not the same, it is an error and correction is required.

Example: To calculate the check digit for “095512345600198”:

$$\begin{array}{rcl}
 \text{Step 1:} & 0 + 5 + 1 + 3 + 5 + 0 + 1 & = 15 \\
 & & \times 3 = 45 \\
 \text{Step 2:} & 9 + 5 + 2 + 4 + 6 + 0 & = 26 \\
 \text{Step 3:} & \text{Add results of Steps 1 \& 2} & = 71 \\
 \text{Step 4:} & \text{Determine Check Digit} & = 9 \\
 & & 80
 \end{array}$$

The complete number is “095512345600198.”

NOTES: There may be one or more instances of CLD used in connection with a single Line Item (LIN) Segment to relate quantity of items shipped for one or more requisitions.

WAWF only accepts CLD in the Line Item Loop (HL03 = I).

There must be only one instance of REF, Position 180, per CLD Loop. If multiple MILSTRIP numbers are associated with the Line Item, each MILSTRIP quantity and MILSTRIP number must be entered in a separate CLD Loop.

1.18 N1 Segment – NAME, Pos. 220 – Detail

NOTES: There must be at least one instance of the N1 Segment per transaction. WAWF only accepts N1 in the Address Loop (HL03 = V). For all N1 segments, N101, N103, and N104 are mandatory.

If N102 is entered, follow WAWF specific requirements below for entering Address data. If all Address Fields are left blank (N102, N2, N3 and N4) Address information will be defaulted.

All addressing Segments (N102, N3, and N4) must be **completed** if an address is being entered. If a Location Code is being entered, then addressing data is not necessary. If Address data is being entered, these Fields at a minimum must be entered:

- For U.S. Addresses, Fields N102, N301, N401, N402, and N403 are the minimum required to complete the Address. Other Fields are optional.
- For Non-U.S. Addresses, Fields N102, N301, N401, N402, N403, and N404 are the minimum required to complete the Address. Other Fields are optional.
- For U.S. Military Addresses, Fields N102, N301, N403, N405, and N406 are the minimum required to complete the Address. Other Fields are optional.

For entry of an APO/FPO address, enter the APO/FPO Zip Code in the N403, the Military Address Indicator (i.e. AR) in the N405 and the APO/FPO code (i.e. AA, AE, or AP) in the N406.

Address information can only be entered for the Ship To (N101 = ‘ST’) and Ship From (N101 = ‘SF’) roles.

The N1 loop may also be used to submit email addresses to which WAWF will forward an additional workflow notice for the document. When submitting email addresses, only the N1 and PER segments should be submitted in the N1 loop.
